# INNOVATION SINCE 1877

From our home in Norway, Helly Hansen has been making professional grade gear that helps people stay and feel alive for the last 140 years.

In 1877, after many years at sea, Norwegian captain Helly Juell Hansen and his wife, Maren Margarethe, began producing oilskin jackets, trousers, sou'westers and tarpaulins, made from coarse linen soaked in linseed oil. Since then, the legacy of Helly Hansen lives on, developing and creating a long list of first-to-market innovations.

## 1949

### HELOX - THE NEXT EVOLUTION IN WATERPROOF

Helox waterproof fabric featured a thin sheet of translucent PVC plastic that was sewn into coats to make them waterproof. It was revolutionary technology that became the must-have protection for outdoor use. With a production of 30,000 coats each month, the success was almost immediate and was used by the Norwegian delegation at the 1952 Olympic Games in Helsinki.

## 1961

### FIBERPILE - THE TECHNICAL MIDALYER IS INVENTED

Helly Hansen partnered with Norwegian Fiber Pile Inc. and developed the original Fiberpile - the first fleece. It featured a high warmth to weight ratio and maintained its thermal qualities even when wet, making it a favorite of lumberjacks and outdoor enthusiasts. The concept lives on and the modern version of Propile is still in production today.

## 1970

### LIFA - THE BIRTH OF TECHNICAL BASE LAYER

HH's LIFA® revolutionized the industry with the introduction of the first technical base layers. LIFA® moves moisture away from the body allowing users to stay warm and comfortable. It has been used by professionals on every ocean, many of the world's tallest peaks and was included in Outside Magazine's list of The Most Influential Gear of All Time in 2012. LIFA® remains the cornerstone of what we believe is the best technical base layer available today.

## 1972

Helly Hansen launches PVC foam with closed cells for use in life jackets. The foam is the preferred flotation material 30 years later.

## 1984

### HELLY TECH® - THE WATERPROOF AND BREATHABLE SOLUTION

Helly Tech® waterproof and breathable fabric was launched in the 1980's, winning awards and setting the new standard for performance and protection. It also provided the final layer for the 1986 introduction of the Helly Hansen 3-Layer System™, an industry - first program educating people on how to dress for the outdoors. Today, Helly Tech® fabrics are engineered to deliver the specific demands of professional skiers, sailors, and at workplaces around the world.

## 1990

### PROWOOL - THE PERFECT BLEND OF LIFA® AND MERINO

The Prowool (renamed HH Lifa® Merino) base layer for cold weather conditions was launched in the late 90's, combining Lifa® Stay Warm Technology™ with Merino wool for both moisture transport and added warmth. Designed for professionals facing the coldest conditions it quickly became the go-to piece for performance, warmth and comfort in extreme environments.

## 2012

### H²FLOW™ - A BETTER SOLUTION FOR TEMPERATURE REGULATION

Helly Hansen introduced the new H²FLOW™ Technology in 2012 with the H²FLOW™ Jacket, which won an Award for Design Excellence from the Norwegian Design Council. The patented H²FLOW™ Jacket features an airflow venting system and a protective barrier. It allows adventurers to efficiently regulate their body temperature.

## 2018

### LIFA® MAX - OUR WARMEST BASE LAYER IN COLD CONDITIONS

Helly Hansen introduces its warmest base layer to date by thickening the already tried and tested Lifa® fibers to produce a warmer, lightweight and flexible garment. The enhanced, unrivaled warmth and comfort is why we believe Lifa® Max is the best technical base layer available today.

## 2019

### LIFALOFT™

With increased warmth, lightweight insulation and superior moisture management properties, LifaLoft™ technology is an insulation revolution that will keep you warmer with less weight and bulk compared to traditional polyester insulation. Developed in cooperation with Primaloft®, LifaLoft™ is a combination of Lifa®'s unique insulation structure and Primaloft®'s extensive knowledge in synthetic insulation.

## 2022

### BRZ - Climate Regulating Comfort

Helly Hansen Workwear launched BRZ. Designed to deliver climate regulating comfort and versatility, BRZ is a product construction bolstered by lightweight fabric and mechanical ventilation.

# SUSTAINABILITY & RESPONSIBILITY

---

We create professional-grade gear to help people stay and feel alive in the harshest environments in the world. Ever since Helly Hansen was founded by sea captain Helly Juell Hansen in 1877, we have developed high-quality gear to protect people at sea and in the mountains, and we have an obligation to protect these environments.

After 140+ years in business, we know that long-term success can only be achieved by respecting, protecting and promoting ethical values, human rights and the environment. We are committed to continue advocating for the responsible use and enjoyment of the oceans, mountains and the greater outdoors. By applying a holistic and scientific approach to all our decisions, we strive to ensure our actions support the possibility for people and the planet to thrive.

## PLANET HEALTH

Our planet is facing enormous challenges with climate change, acidification of our oceans, water scarcity, biodiversity, water pollution and more. Helly Hansen knows that as a company, and as an industry, we have a role to play to turn the wheel around towards a positive transformation.

We must secure and apply best available technology to reduce our negative impact – and ensure we maintain the highest quality standards and measure our output.

## RESPONSIBLE CONSUMPTION

Our natural resources are limited, and today we are over-consuming materials and other resources to the extent that humans would need 1,7 globes to support us.

We need to bring that down to one-planet consumption by implementing a circular mindset and approach to our products, applying materials with improved environmental profiles.

We make sure to never compromise on quality and always strive to make long-lasting products.

## ENGAGE

Through collaboration and communication internally and externally, we see that goals can be met, and targets can be reached. Inspiring and supporting people to get outside exploring nature strengthens the feeling of belonging to our planet, and wanting to protect it.

Focus will therefore be on building strong relationships with professional partners, volunteer groups and customers wanting to make a positive impact.

## LIVELIHOOD & LABOR RIGHTS

Helly Hansen has a clear philosophy that close engagements with our partners and long-term relationships lead to greater job satisfaction and the feeling of empowerment amongst the people working within our supply chain.

We will continue to work towards proper living wages, workplace safety and protection against discrimination. Focus will be on social programs where dialogue and improvement plans are put into place.

# 3-LAYER SYSTEM

---

## DRY.

Often referred to as second skin, Helly Hansen base layers are vital to temperature regulation and moisture management in any setting. As you work hard, our LIFA® Technology moves moisture away from the skin, leaving you dry and comfortable. Our current range of base layers are categorized by warmth level, allowing you to select the best fit for your need.

## WARM.

When faced with colder conditions, Helly Hansen thermal midlayers trap warm air from your body to insulate when you need it most. As you warm up, some of our midlayers can ventilate to expel excess heat and like our base layer range, also allow moisture to pass through, keeping you dry and warm for long days on site. Midlayers should always be selected according to the conditions and activity you're faced with.

## SAFE.

The final component to the 3-layer system is an outer, protective outer layer. Using our award-winning Helly Tech® waterproof membrane, we have been able to create a wide range of durable, protective and seam sealed jackets for all-season use. It is important that the outer layer is also breathable, allowing for proper ventilation and moisture management to combat overheating. Depending on the temperature, the outer layer can protect you from wind, rain or snow, making it a vital piece to any collection.

HELLY HANSEN INTRODUCED THE 3-LAYER SYSTEM TO THE INDUSTRY IN THE EARLY 70S, AND WE'VE BEEN PUSHING IT FORWARD EVER SINCE BY CONSTANTLY IMPLEMENTING NEW TECHNOLOGIES IN OUR GEAR. OUR UNIQUE FLEXIBLE SYSTEM ENABLES YOU TO STAY COMFORTABLE AND PROTECTED WHATEVER WORKING CONDITIONS YOU ARE EXPOSED TO, HEAT OR COLD, RAIN OR SNOW.

# HELLY TECH®

WATERPROOF. BREATHABLE. GUARANTEED.

Helly Tech® is the waterproof and breathable outer layer between you and the elements. Its unique membrane stops water molecules going in, but lets moisture molecules escape. Keeping you dry from the outside and comfortable on the inside.

## HOW HELLY TECH® WORKS

1. DWR treated outer fabric is windproof and water-repellent
2. Waterproof and breathable membrane or coating
3. Highly breathable inner fabric, mesh or lining

Helly Tech® is constructed with Polymer Polyurethane (PU ) based membranes and coating technologies. The PU membrane gives softness and stretch to the fabric, while the coating allows waterproofness and breathable qualities. Helly Tech® is made either with Hydrophilic barrier membranes or Micro-porous membranes, depending on the end-use purpose of the fabric.

The Hydrophilic barrier works on an osmotic principle, keeping salts from entering and blocking the pores. The Micro-porous PU membranes are hydrophobic- "water hating" polymers. This membrane construction is responsible for the waterproofness of Helly Tech®, making the pores up to 20.000 times smaller than water droplets, while allowing breathability since the pores are up to 700 times larger than a water vapor molecule, allowing the evaporation of sweat and heat.

Helly Tech® is actually more than just a fabric – it is a combination of a DWR-treated outer fabric, a highly breathable and waterproof membrane, fully sealed seams and often a highly breathable inner fabric, mesh or lining.

The seams of the products are taped over with a waterproof ribbon and glue, preventing any water from entering the small gaps between the stitches of the seams.

There are numerous types of Helly Tech® Fabrics. The main differentiator is the number of plies (or layers) the fabric is built from.

### HELLY TECH® PROFESSIONAL

Extremely waterproof and breathable designs and constructions. For highly aerobic, extremely wet or unusually long-lasting activities in extremely harsh conditions.

### HELLY TECH® PERFORMANCE

Highly waterproof and extra breathable sport specific designs and constructions. For a wide range of high performance outdoor activities during highly challenging, changing and unpredictable weather conditions.

### HELLY TECH® PROTECTION

Fully waterproof, windproof and breathable fabrics and constructions. For all situations and weather conditions where protection from the elements is needed.

#### 3 PLY CONSTRUCTION

Outer fabric + membrane and inner fabric bonded together for lightweight, quick drying and durability.

#### 2,5 PLY CONSTRUCTION

Outer fabric + membrane or coating bonded together with protective print on the inside for extreme lightweight and packability.

#### 2 PLY CONSTRUCTION

Outer fabric + membrane or coating bonded together for breathable waterproofness, protected by inside lining or mesh adding warmth and comfort.

## LAB TESTS

### WATER COLUMN, ISO 811 and JIS LIS L 1092-B1

Gives the value pressure mm of water held back by fabric. 10.000mm is the same pressure you would experience diving to 10m or equal to the pressure from a fire hose.

### BREATHABILITY, JIS L 1099-1985-B1

Gives the value of  $g/m^2/24h$  - the amount of water molecules that can pass through 1 square meter of fabric within 24 hours.

15.000 grams breathability equals that a jacket is able to pass 30 lites of water in 24 hours.

In comparison, our human body perspires 1 liter per 24 hours.

### water repellence, ISO 4920: 1981 and AATCC 35-2006

Spray test: testing of the durable water repellence before and after washing, by drizzling the fabric and measure how many drops that bounce up and if any attaches or wets out the fabric surface.

## WARM. DRY. COMFORTABLE.

Launched in the early 1970s, LIFA® is based on a yarn technology that has been tested and developed over the years. The key functions of LIFA® deliver both moisture management and insulation, moving moisture away from the skin, while transporting perspiration to the surface of the fabric, where it evaporates.

In 2006 LIFA® was combined with non mulsed Merino wool to create the best performing base layer to date.

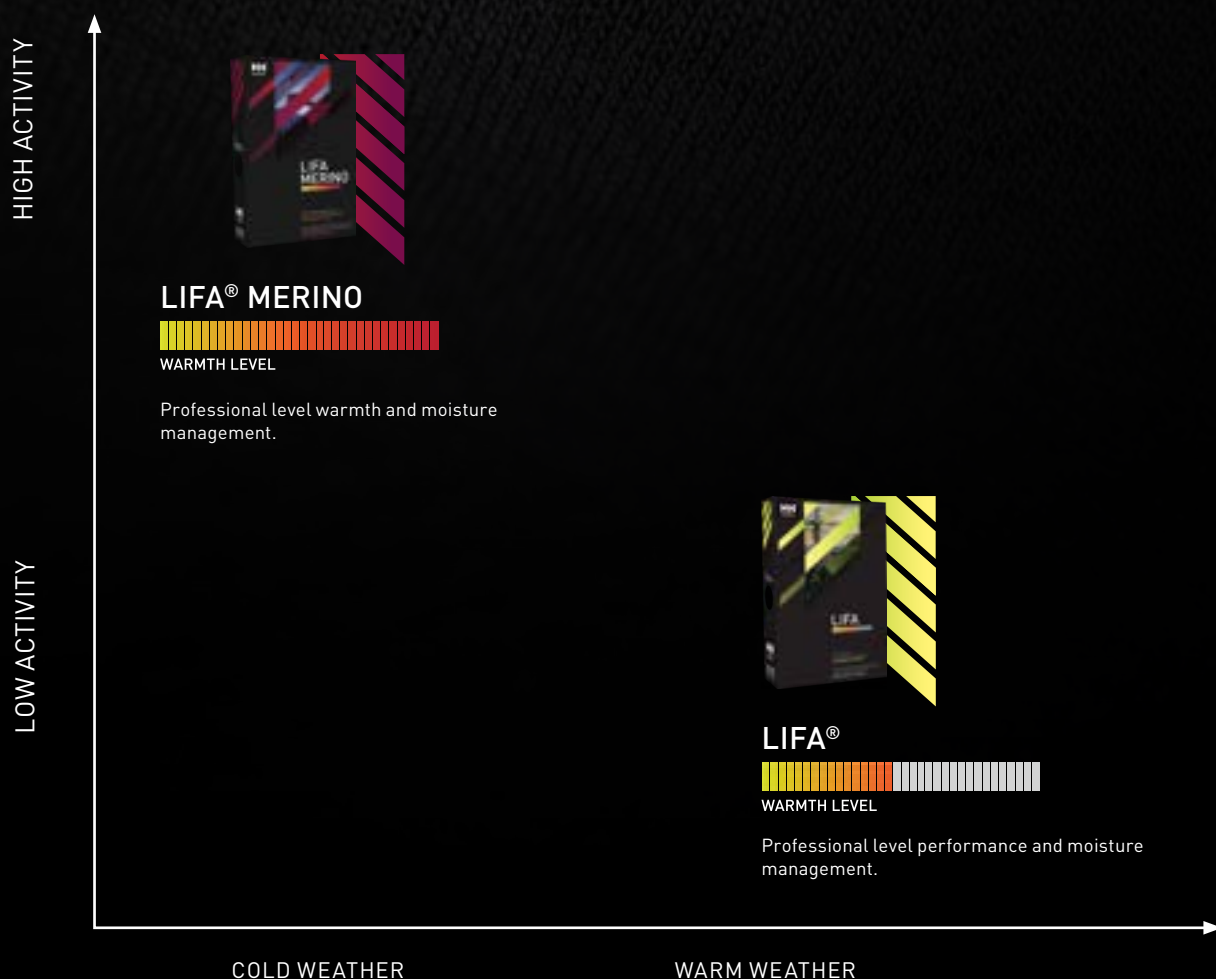

LIFA® is a hydrophobic fiber that prohibits the absorption of liquid. The LIFA® fibers are used on the first membrane layer of base layer garments, the layer nearest to the skin. When the first yarn layer is combined with an additional layer with hydrophilic (moisture absorbing) properties, the sweat from the body is moved away from the skin and transported to the second layer, where it is absorbed. This enables the consumer to stay warm, dry and comfortable.

### HOW LIFA® WORKS

LIFA® stay warm technology moves sweat away from your skin, keeping you warmer for longer

LIFA® is an ultra-light weight base layer fabric that works perfectly in the autumn and winter. HH LIFA® delivers light insulation and moisture management through its 100% single layer LIFA® fibers. The LIFA® technology works best when layered under another garment, as the more garments you wear, the further the sweat and moisture will be transported out of the fabric and away from your skin.

## LIGHTER. WARMER.

Developed in cooperation with Primaloft®, LIFALOFT™ is a combination of LIFA®'s unique insulation structure and Primaloft®'s extensive knowledge in synthetic insulation.

### LIGHTER AND STILL WARMER THAN STANDARD INSULATION

With increased warmth, lightweight insulation and superior moisture management properties, LIFALOFT™ technology is an insulation revolution that will keep you warmer with less weight and bulk compared to traditional polyester insulation.

### HOW LIFALOFT™ WORKS

The unique hydrophobic properties of the Lifa® fibers deliver moisture management necessary for high endurance activities, whilst the PrimaLoft® structure offers high insulation and breathable performance insulation for all active pursuits.

LIFALOFT™ insulation is based on LIFA® fiber technology that is engineered into a lightweight structure that traps more air than standard polyester, providing extra warmth, the fiber does not absorb water, making the insulation technology ideal for intense activities in variable winter or summer conditions.

### TECHNICAL DETAILS

LIFALOFT™'s insulation creates more air pockets, giving more warmth

HYDROPHOBIC

LIFA® fibers have better moisture transportation properties

A better environmental option

## WARMER. COOLER. DRIER.

Helly Hansen jackets with the H<sup>2</sup>Flow™ technology cools you down 20% faster than competitor jackets without the technology, measured on the same weight and insulation.

H<sup>2</sup>Flow™ allows you to control your body's temperature. The technology optimizes insulation, using air pockets or holes that store warmth from the body and, at the same time, allows you to control heat and airflow through ventilation zippers, enabling the cold air to enter and the warm air to exit.

Negative or positive air space is created by adding or subtracting fabric on the inside of the garment to allow this extra air space to be filled with air heated up by the body. In both cases, the purpose is to create pockets of air in strategic areas of the body, trapped in these channels or spaces. The air contained in these pockets heats up from the body heat of the wearer, and keeps you warm.

### HOW H<sup>2</sup>FLOW™ WORKS

Ventilation zippers let cold air in if you get too warm. Air pockets or holes store warmth from your body, so all H<sup>2</sup>Flow™ jackets have a high warmth to weight ratio.

# CARING FOR YOUR HELLY TECH® GARMENTS

---

Taking care of your Helly Tech® garments are vital to the life of the product. Washing them will remove contaminating substances such as oils, dirt and salt from the surface and restore the surface tension of the fabric, allowing the membrane to perform at its best for years to come.

Unsure of when it's time to wash your garment, here are a few signs to look for:

- If the water and/or rain droplets no longer bead off the surface of the jacket and start leaving a wet mark, the durable water repellency (DWR) treatment may be worn off or de-activated.
- If the breathability does not seem to be on the same level as when you first purchased your Helly Tech® garment, the membrane could be contaminated.
- If you need to re-apply a DWR, we recommend doing so after washing and before tumble drying.

---

## HOW TO RE-APPLY YOUR DWR:

### HOW TO WASH YOUR HELLY TECH® GARMENT:

1. Make sure you zip up all zippers to avoid any surface damage.
  2. Wash your product with warm water as instructed on the care label located on the inside of your garment on the left-hand side in a commercial washing machine.
  3. Do not use fabric softener or other detergents that have softening agents, as it will reduce the fabric surface tension and will have a negative effect on the fabric performance.
  4. Helly Hansen advises to use a technical washing product and to follow the instructions given by that product. In cases where no technical washing products exist, and you only have the option of normal washing products, Helly Hansen advises to use a liquid washing product with no additives (without perfume, foam or softener).
  5. A second rinse cycle with water is preferred to remove any detergents that might be left behind on the surface. It is important to remove excess detergent, as it might affect the performance of the fabric.
  6. After washing, you can safely tumble dry your Helly Tech® garment in order to re-activate the DWR treatment. Please always follow the garment care label for drying instructions.
1. Take your garment out of the washing machine and hang it, to allow all excess water to drip off.
  2. Make sure all pockets and zippers are closed
  3. Read the DWR label from the manufacturer's instructions and spray the DWR across the front and back of the garment, making sure to cover areas of high wear.

# LIFE POCKET™

A pocket engineered to preserve your personal electronics' battery life span. Scientifically tested and proven by engineers to extend the battery life of your mobile phone or action camera in cold environments. Through thermal resistant materials and an innovative construction, the Life Pocket™ stays 2 times warmer than a regular pocket.

## 3M™

Science. Applied to Life.™

3M™ is a pioneer in developing the science behind retroreflection and has been advancing the technology in new and groundbreaking ways for over 70 years. With more than 35 different products, including many high performance options, 3M™ Scotchlite™ Reflective Material offers one of the largest and most diverse portfolios in the industry. It is a trusted name in reflective material technology.

## YKK®

Little parts. Big difference

Little parts, Big difference. High quality zippers for all purposes. YKK® is a Japanese company founded in 1934. Today, their products are sold globally and YKK® is reputed as the industry leader for quality and innovative zippers and closures.

## AMANN

Since 1854, AMANN has been one of the leading international manufacturers of high-quality sewing threads, embroidery threads and Smart Yarns.

## CORDURA®

Durable. Versatile. Reliable

If It's Made With CORDURA® Fabric, It's Made To Last. CORDURA® fabrics are the perfect combination of durability, versatility and reliability. For more than 40 years, people who love the outdoors have relied on CORDURA® fabrics to be as rugged as they are.

## DALETEC

Daletec is the trusted Norwegian producer of protective fabrics providing flame resistant solutions for workwear that protects against heat and flames, electric arc and other workplace hazards. Daletec fabrics are famous for their consistent high quality, comfort, extreme durability, and respected for delivering reliable production and environmentally friendly solutions.

## POLARTEC®

The Cornerstone of fleece insulation

We work extensively with Polartec®, a famous manufacturer of lightweight and warm fleece, which is known for performance, durability and aesthetics. Main benefits for using Polartec® are warmth without high additional weight, high breathability, packable and fast drying.

## PRIMALOFT®

The world's best down alternative

PrimaLoft® is a synthetic insulation technology, offering superior thermal properties with excellent water repellency. It is made up of ultra-fine fibers that form air pockets to trap heat inside. Additional feature of the ultra-fine fiber is super softness.

## COMFORTEMP®

Thermal Insulation

Comfortemp® Thermal Insulation by Freudenberg is a high-performance and sustainable alternative to down. The ultra-soft & lightweight insulation is migration resistant, fast-drying and will not clump when washed. Additionally, the durable insulation offers optimal breathability, ensuring comfortability for extended wear.

## BLUESIGN®

bluesign® provides a holistic solution for safe and environmentally friendly textile production, working at each step of the supply chain to ensure that products meet rigorous benchmarks with focus on People, Environment and Resources.

# CA STANDARDS

## RELATED TO HELLY HANSEN WORKWEAR

Helly Hansen Workwear's (PPE) products are manufactured and certified in accordance with the Regulation (EU) 2016/425 by using harmonised European standards and therefore are CE marked.

The importance to ensure the wellbeing and safety of workers highlights the need of suitable personal protective equipment. Regulation (EU) 2016/425 defines obligation for the employers to provide the most appropriate protection against health risks and other potential hazards for their employees. That can be defined during a strict Risk Assessment at the workplace based on the PPE Regulation guidelines.

Based of various potential dangers at work, the PPE must meet relevant safety standards. Helly Hansen workwear is intended to prevent health risks that can happen during exposure to cold, heat, fire, rain, limited visibility and similar.

**Helly Hansen advises to read more on our website.**

### EN ISO 20471:2013+A1:2016

#### HIGH VISIBILITY CLOTHING

This standard specifies requirements for protective clothing capable of signalling the user's presence visually. The standard intends to provide high visibility of the user under any light conditions by day and under illumination by vehicle headlights in the dark.

There are performance classes defined based on minimum areas of retroreflective and fluorescent materials, as well as garment design requirements. Each of these classes will provide a different level of visibility, class 3 giving the highest degree. The high visibility class can be achieved with a single garment or a garment combination (e.g., jacket + pant).

	Fluorescent material	Reflective material
Class 3	0,80 m <sup>2</sup>	0,20 m <sup>2</sup>
Class 2	0,50 m <sup>2</sup>	0,13 m <sup>2</sup>
Class 1	0,14 m <sup>2</sup>	0,10 m <sup>2</sup>

### EN 343:2019

#### PROTECTIVE CLOTHING

##### PROTECTION AGAINST RAIN

The standard specifies requirements and test methods for the performance of materials, seams, and readymade garments for protection against rain, snowflakes, fog and ground humidity. Resistance to Water Penetration and Water Vapour Resistance is tested.

Value 1 = Resistance to Water Penetration, class 1 - 4 (class 4 is the best waterproofness).

Value 2 = Water Vapour Resistance, class 1 - 4 (class 4 is the highest permeability).

Value 3 = Rain Tower Test (optional test of readymade garment), R.

### EN 342:2017

#### PROTECTIVE CLOTHING

##### PROTECTION AGAINST COLD

The standard specifies test methods and requirements in protective clothing ensembles which are intended to protect against cold (air temperature below -5 °C). The standard is taking into account not only low air temperatures but also humidity and air velocity.

Helly Hansen has tested its products according to method B, which means that the Thermal Insulation has been measured for a garment ensemble (jacket + pant or coveralls) with a base layer. The value is representing protection for a wearer performing light or moderate activity.

The protection can only be guaranteed if the complete ensemble is worn.

Value 1 = Thermal Insulation Value of the Ensemble (with underwear B),  $I_{cler}$   
Value 2 = Air Permeability, class 1 - 3 (class 3 is the most permeable)  
Value 3 = Water Penetration (optional), WP

### EN 14058:2017

#### PROTECTIVE CLOTHING

##### PROTECTION AGAINST COOL ENVIRONMENTS

This standard specifies requirements and test methods for performance of single garments for protection in cool environment (air temperature above -5 °C). The garment can provide a degree of protection for a certain length of time, depending e.g., on the personal constitution and activity, the accompanying clothing and weather.

Value 1 = Thermal Resistance, class 1 - 4 (class 4 is the warmest)

Value 2 = Air Permeability, class 1 - 3 (class 3 is the most permeable)

Value 3 = Thermal Insulation Value,  $I_{cler}$ . Mandatory for class 4. Optional for classes 1 - 3.

Value 4 = Water penetration (optional), WP

# CA STANDARDS

## IEC 61482-2:2018

### PROTECTIVE CLOTHING

PROTECTIVE CLOTHING AGAINST THE THERMAL HAZARDS OF AN ELECTRIC ARC.

This standard specifies methods to test material and garments intended for use in heat- and flame-resistant clothing for workers exposed to electric arcs. Clothing fulfilling this standard ensures that the consequences of workers after the accident, will not be aggravated by the clothing itself.

Under the standard IEC 61482-2:2018 there are two test methods:

- Open Arc Test Method: EN IEC 61482-1-1:2019, measured in  $\text{cal}/\text{cm}^2$  and expressed as an arc thermal protection value (ATPV), breakdown threshold energy value (EBT) or the incident energy limit (ELIM). The higher the value, the better the protection.
- Box Test Method: EN IEC 61482-1-2:2014, measured in kA. It is expressed in either APC 1 (4 kA) or APC 2 (7 kA). APC 2 is the higher level of protection.

## EN ISO 11611:2015

### PROTECTIVE CLOTHING

PROTECTION FOR USE IN WELDING AND ALLIED PROCESSES

This standard specifies minimum basic safety requirements and test methods for protective clothing that are designed to protect the wearers body during welding and allied processes. The standard defines design requirements that would prevent hot/molten materials or sparks getting trapped in pleats, hanging and open pockets or similar. Two-piece garment must be worn together to provide the indicated level of protection.

This type of protective clothing is intended to protect the wearer against spatter (small splashes of molten metal), short contact time with flame, radiant heat from an electric arc used for welding and allied processes.

The standard is divided into two classes:

#### Class 1:

Provides protection for welding techniques with light formation of spatters and drops, such as TIG or MIG (with low current), with lower levels of radiant heat. The material must withstand at least 15 drops of molten metal.

#### Class 2:

Provides protection for welding techniques with heavy formation of spatters and drops, such as MAG (with CO<sub>2</sub> or mixed gases) or MIG, with higher levels of radiant heat. The material must withstand at least 25 drops of molten metal.

## EN ISO 11612:2015

### PROTECTIVE CLOTHING

PROTECTION AGAINST HEAT AND FLAME

This standard specifies performance requirements for garments made from flexible materials, which are designed to protect the wearer's body. Standard is to provide minimum performance requirements for

clothing to protect against heat and flame, which could be worn for a wide range of end uses. Two-piece garment must be worn together to provide the indicated level of protection.

- A = Limited flame spread, A1 or A2 (A1 – surface ignition, A2 – edge ignition)  
B = Convective heat, Level B1 – B3 (B3 is the highest)  
C = Radiant heat, Level C1 – C4 (C4 is the highest)  
D = Molten aluminium splash, Level D1 – D3 (D3 is the highest)  
E = Molten iron splash, Level E1 – E3 (E3 is the highest)  
F = Contact heat, Level F1 – F3 (F3 is the highest)

Garments that are designed to protect against the risk of exposure to molten metal splash by meeting the performance requirements designated by code letters D and E, meet design requirements that would prevent hot/molten materials getting trapped in pleats, hanging and open pockets or similar.

## EN ISO 14116:2015

### PROTECTIVE CLOTHING

PROTECTION AGAINST HEAT AND FLAME. LIMITED FLAME SPREAD

This standard specifies the performance provide minimum performance requirements for clothing in order to reduce the possibility of the clothing and/or its materials burning when in occasional and brief contact with small flames and thereby, itself constituting a hazard.

The standard is divided into three indexes, where index 3 is the highest.

Garment approved according to index 1 should not be used next to skin and should only be used together with underwear approved according to index 2 or 3.

## EN 1149-5:2018

### PROTECTIVE CLOTHING

ELECTROSTATIC PROPERTIES.

The standard specifies material and design requirements for electrostatic dissipative protective clothing, used as part of a total earthed system, to avoid incendiary discharges. The requirements may not be sufficient in oxygen enriched flammable atmospheres. The material must meet the requirements set out in EN 1149-1 and/or EN 1149-3.

This European standard is not applicable for protection against high voltages.

## EN 13758-2:2003+A1:2006

### SOLAR UV PROTECTIVE PROPERTIES

Prolonged exposure of the skin to the sun can produce both short- and long-term skin damage. UVA and UVB radiation can be significantly reduced by proper clothing. The level of protection varies considerably and is dependent on many factors, such as fabric properties and garment design. The protection may be reduced if garment is stretched, wet or sweaty.

## RIS-3279-TOM

### HIGH VISIBILITY CLOTHING (UNITED KINGDOM ONLY)

Railway industry

This UK Rail Industry high visibility clothing standard specifies requirements for protective clothing that must be worn by staff when on the train lineside or on or near the line. It is designed to make the railway workers easily visible to drivers of approaching trains, allowing enough time to give an early audible warning.

The RIS-3279-TOM:2019 (former GO-RT 3279) standard is based on the European standard EN ISO 20471, and the garments must at minimum meet the requirements of Class 2, based on a classification system from Class 1 to Class 3. While EN 20471 allows use of three different fluorescent background colours: yellow, orange-red and red, RIS-3279-TOM:2019 standard specifies fluorescent orange colour only. Colour requirements are more precise, in order to limit the colour variance to more luminous and more vibrant orange.

# CA STANDARDS

## NFPA 2112-2022

### STANDARD ON FLAME-RESISTANT GARMENTS FOR PROTECTION OF INDUSTRIAL PERSONNEL AGAINST FLASH FIRE

This standard specifies the minimum performance requirements and test methods for flame-resistant fabrics and components and the design and certification requirements for garments for use in areas at risk from flash fires. This standard shall provide minimum requirements for the design, construction, evaluation, and certification of flame resistant garments for use by industrial personnel, with the intent of not contributing to the burn injury of the wearer, providing a degree of protection to the wearer, and reducing the severity of burn injuries resulting from short-duration thermal exposures or accidental exposure to flash fires.

## ASTM F1506

### ELECTICAL ARC TEXTILE BASED PROTECTIVE CLOTHING

ASTM F1506 is a standard specification that establishes test methods, minimum physical and thermal performance criteria, and labeling for textile-based apparel used by workers who may be exposed to thermal hazards of momentary electric arcs and open flames. The garment material is tested for insulation during a simulated electrical arc exposure.

The test measures the energy required to cause a second degree burn, which is called an arc thermal protective value [ATPV]. Garment materials are also tested for flame resistance, physical strength, colorfastness and laundry shrinkage. Helly Hansen products meeting this standard are shown with the above icon.

## HRC AS PER NFPA 70-E AND CSA Z462

### HAZARD RISK CATEGORY

HRC 0 - is a natural fiber, non-melting clothing for very low level electrical hazards.

HRC 1 - Minimum Arc Rating of 4 cal/cm<sup>2</sup>

HRC 2 - Minimum Arc Rating of 8 cal/cm<sup>2</sup>

HRC 3 - Minimum Arc Rating of 25 cal/cm<sup>2</sup>

HRC 4 - Minimum Arc Rating of 40 cal/cm<sup>2</sup>

## ASTM F 1959

### STANDARD TEST METHOD FOR DETERMINING THE ARC RATING OF MATERIALS FOR CLOTHING

This test method is used to measure the arc rating of materials intended for use as flame resistant clothing for workers exposed to electric arcs that would generate heat flux rates from 84 to 25 120 kW/m<sup>2</sup> (2 to 600 cal/cm<sup>2</sup>s).

## CSA Z462

### WORKPLACE ELECTRICAL SAFETY

This standard is the Canadian equivalent of the NFPA 70-E. The development of this standard was based on the NFPA 70-E with changes being made of Parts I, II and III to harmonize requirements with the Canadian Electrical Code.

Like the NFPA 70-E this standard also defines hazard risk categories based on the arc performance ratings and categorizes the protective.

## ASTM F1930

### STANDARD TEST METHOD FOR EVALUATION OF FLAME RESISTANT CLOTHING FOR PROTECTION AGAINST FLASH FIRE SIMULATIONS USING AN INSTRUMENTED MANNEQUIN.

This test method covers quantitative measurements and subjective observations that characterize the performance of single layer garments or protective clothing ensembles in a simulated flash fire environment having controlled heat flux, flame distribution, and duration. This test method is used to provide predicted human skin burn injury for single layer garments or protective clothing ensembles mounted on a stationary instrumented mannequin which are then exposed in a laboratory to a simulated fire environment having controlled heat flux, flame distribution and duration. This test method is required as part of ASTM F2733 and NFPA2112

## EN 533

### \*WITHDRAWN STANDARD PROTECTIVE CLOTHING - PROTECTION AGAINST HEAT AND FLAMES - MATERIAL AND MATERIAL COMBINATIONS FOR LIMITED SPREAD OF FLAME

This European Standard specifies performance requirements for limited flame spread materials and material assemblies used in protective clothing. Protective clothing constructed from materials and material assemblies complying with this European Standard is suitable for protection against accidental contact with small igniting flames, in circumstances where there is no significant heat hazard. Three levels of performance are specified. Index 1 materials do not spread flame but may form a hole on contact with a flame. Index 2 materials and material assemblies do not spread flame and do not form a hole on contact with a flame. Index 3 materials and material assemblies do not spread flame and do not form a hole on contact with a flame, they also produce limited afterflame.

## QC MOT

### HIGH VISIBILITY CLOTHING

This standard sets out the requirements for high visibility clothing for road workers in the province of Quebec. This standard defines the background color, retroreflection index, width, color and pattern of the reflective bands.

## BC MOT

### HIGH VISIBILITY CLOTHING

Traffic Control must wear safety apparel conforming to Class 3 garments meeting both the CSA Z96 standard and the WCB requirement. These garments require a fluorescent contrasting color stripe that is a minimum 100 mm (4 in.) in width. The retro-reflective bands of tape used on these garments are at a minimum 50 mm (2 in.) in width.

## CSA Z96

### HIGH VISIBILITY CLOTHING

This standard addresses apparel intended to provide visibility to wearer in both daytime and nighttime conditions. The standard sets requirements for the minimum area and color performance for fluorescent background materials and striping for daytime visibility and nighttime visibility when illuminated by headlights. Three garment classes are established based on the amounts of fluorescent background.

## CAN-CGSB 155.20

### WORKWEAR FOR PROTECTION AGAINST HYDROCARBON FLASH FIRE

This standard states the minimum requirements for performance of workwear worn for protection against hydrocarbon flash fire. This standard establishes performance requirements and test methods for evaluation of components used to construct workwear. Workwear meeting this standard is intended to provide a degree of protection to the wearer and reduce severity of injury should a hydrocarbon flash fire occur. For the purpose of this standard "protective" does not mean that a wearer will suffer no burns if exposed to flash. workers in the province of Quebec. This standard defines the background color, retroreflection index, width, color and pattern of the reflective bands.

# CHEMICAL COMPATIBILITY

The chart below shows chemical compatibility of waterproof fabrics coated with polyvinylchloride (PVC) and polyurethane (PU).

- Chemical not expected to degrade work wear material
- **CAUTION** - Chemical not expected to degrade material but is skin toxic or suspect/actual carcinogen; consider alternative suit design and material
- **WARNING** - CHEMICAL WILL DEGRADE WORK WEAR MATERIAL
- No data is available to rate material.

The data provided in this chemical-material compatibility guide are based on recommendations from the 3rd edition for the "Guidelines for the Selection of Chemical Protective Clothing," ACGIH, Cincinnati, 1987. Helly Hansen makes no warranties regarding the use of this information.

The end user must conduct a hazard assessment based on the conditions of use and determine the suitability of appropriate protective clothing on a case-by-case basis. Permeation or penetration testing against the chemical(s) of interest may be required to determine the barrier effectiveness of the material.

## HANGING TOOL POCKETS

---

The Helly Hansen hanging pockets allow you to carry all your necessary tools without the need for an additional toolbelt. Easily detachable or folded into the standard pants pocket when not in use, the hanging pockets provide additional space for small parts, featuring two compartments and a tool strap for added carrying capacity.

The hanging pockets are double lined and feature Cordura® reinforcements for added durability, making them perfect for even the toughest jobs.

## EXTENDABLE LEGS

---

Ensuring a perfect fit for the Helly Hansen Workwear pants is more than just for comfort, it's for safety. If pants are fitted correctly, you minimize the risk of getting caught on something while on site and maximize the life of the products with strategically placed reinforcement fabrics. Additionally, the product will feel more comfortable, as it will enable optimal movement.

Most of Helly Hansen Workwear C-sized and D-sized pants can be extended by unpicking a seam at bottom hem

How to extend the bottom hem of your HH Workwear pants:

If your product has the extendable leg feature, you will find 3 threads on the bottom hem, 2 close together at the nearest bottom, 1 thread above the 2 that holds the additional material. These can either be in a contrast color or in a tonal color.

From the inside of the pant, rip the top thread carefully, as to not tear the garment

Remove the thread completely and pull the hem to reveal the additional material

## 2-WAY STRETCH VS 4-WAY STRETCH

---

Stretch can be defined by the possible direction of movement, such as 2-way or 4-way stretch. In a 2-way stretch, the fabric will only move in one direction, crosswise or lengthwise. A 4-way stretch fabric means it can move in both of these directions, allowing for unrestricted movement.

## 2-WAY MECHANICAL STRETCH

---

Similarly, stretch can be defined by how the fabric is created. Elastane stretch refers to fabrics where elastane thread is part of the structure and the amount of stretch depends on the percentage of elastin within the fabric. Alternatively, when yarn texture is combined in knitting techniques to create a small amount of stretch in an overall fabric, we refer to this as a mechanical stretch.

A full-page photograph of a worker in a bright orange high-visibility suit with reflective yellow-green stripes, shoveling snow in a winter setting. The worker is wearing a hooded jacket, black gloves, and black boots. The background shows snow-covered evergreen trees under a clear blue sky. A white rectangular box is overlaid on the worker's torso, containing the text 'HI VIS'.

A close-up photograph of a thatched roof, likely made of straw or reeds, with a white rectangular box overlaid in the center containing the text 'FR'. The background is a dense, textured mass of golden-brown, dry plant material. The lighting is warm, highlighting the texture of the thatch. The text 'FR' is centered within the white box.

FR

# WORKWEAR / NA SIZE CHARTS

Helly Hansen protective clothing is designed and manufactured in such a way that it does not have any effect on the user's health or hygiene. The design guarantees a correct fit and protection for the body when used correctly.

The design and material offer function and comfort.

The material offers good fade-resistance, stability, strength and durability, to ensure that the garments have a long life, even with heavy use and many washes.

Size grading is based on body measurements in centimeter, see the size guide. All garments are properly marked on garment labels and on external labels to indicate the information required for the standard.

## MEN / BODY MEASUREMENTS

## HOW TO MEASURE

**1: BODY HEIGHT**

**2: CHEST**

**3: WAIST (AT BELLY-BUTTON HEIGHT)**

**4: WAISTBAND (WHERE YOUR PANTS' WAISTBAND IS PLACED)**

**5: HIP**

**6: INSEAM**

**CHECK YOUR BODY MEASUREMENTS AS INSTRUCTED AND COMPARE WITH THE DATA IN THE TABLE.**

**CHEST:** With arms relaxed at sides, measure around fullest part of chest.

**WAIST:** Measure around natural waistline, smallest part of waist.

**HIPS:** Standing with legs together, measure around fullest part of hips.

**INSIDE LEG:** Measure inside length of your leg from crotch to bottom of
